NOTICE OF APPLICABILITY OF RESOLUTION NO. R5-2003-0106 JULIE LA PLA WINERY, LLC, SOLANO COUNTY

Regional Water Board staff has reviewed your 9 May 2006 Report of Waste Discharge (RWD) for coverage under Resolution R5-2003-0106, *Waiver of Waste Discharge Requirements for Small Food Processors, Including Wineries, Within the Central Valley Region*. The RWD included a *Notice of Non-Applicability* for compliance with the storm water General Permit and an \$872 filing fee. Our review finds the RWD to be substantially complete.

Resolution No. R5-2003-0106 (a copy of which is enclosed), adopted by the Regional Water Board on 11 July 2003, is a conditional waiver of waste discharge requirements for small food processors including wineries. Based on the information you have submitted, the discharge as described in the RWD satisfies the general and specific conditions of Resolution No. R5-2003-0106 for the projected volume of wastewater to be produced.

Discharge Description

Julie L. Larson (Discharger) owns and operates the Julie La Pla Winery at 7786 West Ranch Lane, Vacaville, in Solano County. The winery is on 4.7 acres; the property includes a one third-acre vineyard and two-acre horse pasture to which wastewater will be applied. The Discharger estimates that approximately one ton of grapes will be crushed annually producing approximately 360 gallons of wine (approximately 150 cases of wine). The Discharger estimates approximately 360 gallons of wastewater will be generated on an annual basis.

All activities producing wastewater will be conducted under the cover of an enclosed building equipped with drains to collect wastewater. Wastewater will be screened in a floor drain, collected in a 70-gallon tank, and then pumped daily into a distribution system of hoses. No wastewater will be applied during times of precipitation or when the soil is saturated. Activities in the winery will be curtailed or modified to prevent the application of wastewater when climatic or soil conditions do not allow application. The primary method of wastewater disposal will be overland flow to 2.33-acres of vineyard and horse pasture.

Based on the typical volume and strength of wastewater that will be produced, the anticipated maximum hydraulic and agronomic loading rates for the proposed disposal area fall within an acceptable range. Based on calculations, the proposed 2.33-acre land application area should have adequate hydraulic and nutrient uptake capacity to receive the total wastewater

California Environmental Protection Agency

discharge from this facility and remain protective of groundwater and surface water quality.

The Discharger has identified Best Management Practices that will be implemented to minimize wastewater strength and potential odor problems, and to prevent hydraulic or nutrient overloading. Those practices include source control and management of winery activities consistent with climatic conditions. Wastewater data will be compiled and included in an annual report.

Solid waste produced by the facility will consist of grape seeds, stems, skins, and lees. It is estimated that no more than 375 pounds of solid waste will be generated annually. Solid waste will be spread on the vineyard and tilled into the soil if needed to prevent odors. As a contingency solid waste management option, the Discharger can transport the waste to a landfill for disposal.

Conditional Waiver

Based on the information submitted in the RWD, the discharge as described above satisfies the general and specific conditions of Resolution No. R5-2003-0106 for the current amount of wastewater produced. This letter serves as formal notice that Resolution No. R5-2003-0106 is applicable and waste discharge requirements for this facility are waived.

Enclosed is a copy of Resolution No. R5-2003-0106 and the associated monitoring and reporting program. An annual report that contains the information described in Items No. 1, 2, and 5 of the monitoring and reporting program must be submitted by **1 February** of each year.

If the discharge violates the terms or conditions of the waiver, the Regional Water Board may take enforcement action, including assessment of administrative civil liability. Based on the site conditions described in the RWD, staff estimates that Julie La Pla can crush and apply the wastewater from the equivalent of one ton of grapes (a maximum of 360 gallons/year). If the volume of wastewater exceeds 360 gallons per year or the method of winery wastewater and solids disposal change from those described in the RWD, the Discharger must submit a new RWD. Please note that the waiver will expire on 11 July 2008, at which time the Discharger must submit a new RWD with filing fee to renew the waiver, or cease the discharge.

If you have any questions, please contact George W. Lockwood at (916) 464-4697.
